Andhra Pradesh, India

Career Objective

Computer Science undergraduate with a strong foundation in software engineering, programming, SQL, data processing, and AI/ML fundamentals. Seeking a Trainee Software Engineer role at Tiger Analytics to apply problem-solving and analytical skills to build data-driven solutions and solve complex business challenges. Quick learner with hands-on experience in backend development, data engineering, and business intelligence.

Education

Koneru Lakshmaiah Education Foundation, Andhra Pradesh
Engineering CGPA: 9.02 / 10.0

B.Tech, Computer Science and Engineering

Technical Skills

Programming: C++, C, Java, Python, SQL, JavaScript

Software Engineering: Object-Oriented Programming, Data Structures Algorithms, REST APIs, Spring Boot, Spring Data JPA, Hibernate

Data Analytics: Pandas, PySpark, Data Cleaning, Data Transformation, ETL, Data Analysis, Power BI

Database: MySQL, SQLite

AI/ML: Machine Learning Fundamentals, Data Preprocessing, Feature Engineering, Model Evaluation

Tools Platforms: Git, GitHub, Docker, Oracle Cloud Infrastructure

Projects

HostelHub – Full-Stack Hostel Management Booking Platform *Java, Spring Boot, Spring Security, JWT, Hibernate/JPA, MySQL, React.js, REST APIs*

- Developed a full-stack hostel management and room booking platform by translating functional requirements into software features and REST-based workflows.
- Designed a layered backend architecture using Spring Boot, JPA, and MySQL to manage students, landlords, hostels, rooms, and booking operations.
- Implemented JWT-based authentication and role-based access control for STUDENT, LANDLORD, and ADMIN users, ensuring secure access to application resources.
- Implemented room availability and booking validation logic to prevent overbooking and maintain data consistency across booking transactions.

Retail Sales Data Engineering Pipeline

Python, Pandas, PySpark, MySQL, Power BI, Docker

- Developed an end-to-end data engineering pipeline using Python and PySpark to ingest, clean, transform, validate, and process retail sales data.
- Applied data transformation and validation techniques to convert raw transactional data into structured datasets suitable for analysis and reporting.
- Used SQL and MySQL to store and query processed sales data, enabling efficient analysis of transaction and business metrics.
- Built interactive Power BI dashboards to identify sales trends and patterns and generate actionable insights for business decision-making.

Experience

AI-ML Virtual Internship – AICTE EduSkills 2024

- Gained hands-on exposure to machine learning workflows, data preprocessing, feature engineering, and model evaluation through practical exercises.
- Applied fundamental AI/ML concepts to understand data-driven problem solving and the development and evaluation of machine learning solutions.

Certifications

- Oracle Cloud Infrastructure Foundations Associate
- Microsoft Certified: GitHub Actions
